- **Checkerboard, Ltd. – Software Engineering Intern.** June 2012 – March 2013. Duties included feature development on EasyInvite.com.

## Technical Expertise

- Agile and XP-based software development, with professional experience in test-driven development and continuous integration.
- Frontend web development with Backbone and Marionette, jQuery, ExtJS, Bootstrap, JSP, and several charting libraries.
- Backend web development with NodeJS, Flask, Sinatra, Rails, PHP, and Java EE.
- Database design and development in SQL and Redis and extensive experience with MongoDB.
- Programming in Java, Javascript, Ruby, PHP, Python, C, and Apex (Salesforce).

## Selected Personal Projects (Source Available on Github)

- anam.io – an automatic backup service for GitHub repos. With every push to a selected repo, the codebase is saved and uploaded to Amazon s3, where it can be accessed easily in the case of a GitHub outage. Powered by Sinatra on the backend. <http://anam.io>
- shmaiku – a brief experiment in crowd sourced haiku. Built on a pure-Javascript stack, the project leverages principally the MeteorJS framework. <http://shmaiku.meteor.com>
- cherry-ripe – chat rooms for the super paranoid, both the content and intended recipients of messages are invisible to all third-party observers. Powered with NodeJS, socket.io, and Redis. <https://cherry-ripe.herokuapp.com>
